

## Minutes of Meeting - 7/3/23

**people present:** Claire, Jack, Michael, Liren, Yudai

### **discussed:**

- formed agreement on the variable names in data.md - included ownerMember and allMember arrays, and confirmed the names of all other variables so we can code more cohesively and avoid variable name inconsistencies
- reminded each other that package.json has to be continuously updated and pushed into master if any additional packages are installed
- reminded each other that merge requests into master must be approved by someone else
- decided to put all helper functions into other.js to avoid double ups and clog up other files
- clarified permissions for global owners
- reinstated due dates for tests and implementations
- confirmed that tests should be ran inside project-backend folder and not the src folder
- highlighted that authRegister and channelCreate must be completed with priority
- briefly mentioned assumptions - note them down if something comes to mind during coding

### **to do:**

- complete implementation of functions by Wednesday
- complete tests of functions by Tuesday
- test and merge functions into master on Thursday
- each member come up with one assumption to be discussed in the lab on Thursday

### **Delegated tasks for each member:**

tests:

claire	authLoginV1, channelsCreateV1
michael	authRegisterV1, channelsListV1
jack	channelDetailsV1, channelInviteV1
yudai	channelMessagesV1, clearV1
liren	userProfileV1, channelJoinV1, channelsListAllV1

implementation:

claire	channelDetailsV1, channelInviteV1
michael	authLoginV1, channelJoinV1
jack	channelsListV1, channelsListAllV1, userProfileV1
yudai	authRegisterV1, channelsCreateV1 (gave to Liren)
liren	channelMessagesV1, clearV1, channelsCreateV1
